PROFESSIONAL SUMMARY

Data Science Engineer with strong expertise in SQL and Python, focused on data cleaning, validation, and analytical problem-solving. Proficient in handling large datasets with high accuracy and ensuring reliable, insight-driven reporting. Committed to delivering precise, business-focused analysis that supports informed decision-making and measurable outcomes.

WORK EXPERIENCE

Data Science Engineer, Feb 2024 – Feb 2026

Technomers – Mangalore, Karnataka

- Worked on a client project for Util-Assist focused on smart meter data management and analytics, improving reporting efficiency by 30% Built and deployed DBT models in Snowflake to resolve smart meter data gaps, improving data completeness by 20%
- Applied machine learning models improving predictive accuracy by 20%
- Performed regression testing and data validation for smart meter projects
- Improved data quality by 25% through preprocessing and cleaning
- Reduced manual data collection time by 60% via web scraping automation
- Optimized SQL queries, reducing analysis time by 30%
- Mentored junior team members on data best practices

Subject Matter Expert (Part-Time), Sep 2023 – Jan 2024

Vaidik Edu Services – Noida

- Provided statistical analysis and hypothesis testing solutions.
- Guided students in applying statistical models to real-world datasets.

Data Analyst Intern, Apr 2023 – Aug 2023

Numentrix Consultancy – Bangalore, Karnataka

- Cleaned and transformed datasets using Excel and SQL.
- Performed complex joins and data manipulation using SQL.
- Built Tableau dashboards to visualize industry performance metrics.
- Delivered actionable insights for fabric industry optimization.

Data Science Intern, Oct 2022 – Nov 2022

Codelab Systems – Mangalore, Karnataka

- Engaged in exploratory data analysis (EDA), dataset cleaning, and model development using machine learning techniques
- Assisted in model evaluation to improve prediction accuracy and performance

ACADEMIC PROJECTS

Liver Disease Prediction Using Machine Learning Algorithms

- Performed data cleaning and EDA to identify patterns for early disease detection
- Derived insights to support better clinical decision-making
- Tools: Python, Tableau

Traffic Sign Board Detection using Deep Learning

- Developed CNN-based model to detect traffic signs for road safety
- Improved detection accuracy through model training and optimization
- Tools: Python, Deep Learning

SKILLS AND EXPERTISE

Programming & Tools:
PostgreSQL, Python, Excel, Tableau, Snowflakes, DBT

Data Engineering:
Data Analysis, Data Cleaning, Web Scraping

Data Science:
Machine Learning, Statistics, EDA, Data Visualization

Soft Skills:
Collaboration, Communication, Problem Solving, Mentoring,

Certifications

- **Data Science Math Skills**
  by Coursera
- **Tableau for beginners**
  by Great Learning.
- **Predictive Modeling and Analysis**
  by Great Learning.
- **Basics of Exploratory Data Analysis**
  by Great Learning.
- **Hypothesis Testing**
  by Great Learning.
- **Data Science Foundation**
  by Great Learning.

EDUCATION

MSc. Big Data Analytics, CGPA: 8.02

St. Aloysius College (autonomous)

11/2021 – 08/2023 | Mangalore

BSc. Statistics, Mathematics, Physics, CGPA: 7.14

St. Aloysius College (autonomous)

06/2018 – 09/2021 | Mangalore
